

Collaboration by design

Combining *your* creative vision
with *our* expertise
to bring powerful designs to life.

Alfred University's Health and Wellness Center, Alfred, NY

If you can dream it, we can design it.

For years, architects have drawn on the experience of Erdman Anthony. We understand the power of creative thinking and how critical your architectural designs are in conveying your unique vision to your clients. We have the people, the expertise, and the technology to build on your inspiration—without compromising your vision—to bring exceptional ideas to life.

What makes us different?

We know buildings. We know the value of teamwork, collaboration, and dedication. And we bring them together to help your projects run smoothly and successfully. Count on us to work closely with you throughout the process, maintaining clear and frequent communication. It's essential for keeping your project on track and synchronized with your goals.

Precision tools for precision results.

Erdman Anthony provides the right tools and expertise to support architects at every stage of the process, including:

- The Autodesk suite of products, Revit MEP, and AutoCAD MEP as the backbone for all of our work, so our designs can be fully integrated with yours.
- A variety of plug-ins and add-on software within these BIM environments to create output files for sharing across multiple software platforms. The files can be used in design coordination, virtual tours, and as part of a 4D process, which involves construction scheduling.
- LEED® certified professionals on staff, plus corporate USGBC® membership to show our commitment to sustainable design.
- Innovative laser scanning to capture existing conditions of the architectural, structural, and MEP systems.
- A strong working relationship with you—from the beginning to the end of your project—to support your building design and the client's end goal.

Building Systems Engineering:

- Heating, Ventilation, and Air-Conditioning Systems
- Integrated Energy Modeling and Life-Cycle Analysis
- Process Piping and Plumbing Systems
- Fire Protection and Life Safety
- Fire Detection and Alarm Systems
- Refrigeration Engineering
- Electrical Power and Distribution
- Lighting Systems
- Telecommunications
- Building Control Systems

Control energy costs. Boost building efficiency.

Erdman Anthony's energy consulting services apply a meticulous, regimented process that gives you an objective evaluation of your current or projected energy usage, approaches to reducing it, how much it will cost to implement these strategies, and what your operating costs will look like over time.

Plan new buildings or substantial renovations.

Whether as a member of the design team or an objective third party, we take an active, collaborative role in optimizing your design to:

- Achieve improved comfort and productivity
- Reduce energy costs through improved efficiency
- Compare actual performance to code-level performance
- Estimate predicted usage
- Calculate savings from incentives and certifications—
NYSERDA, LEED, Green Globes, CHPS

Evaluate existing buildings.

We employ a focused, rigorous energy consulting process to understand your current usage and target savings opportunities. Depend on us to:

- Document existing systems
- Understand current usage
- Verify control sequences
- Analyze actual performance
- Identify areas for improvement
- Estimate the impact of potential changes
- Develop models and simulations
- Evaluate the life-cycle cost of energy-saving measures
- Utilize infrared scanning to evaluate thermal performance of envelopes and systems

Hire us to help bring your designs to life.

For years, architects have chosen Erdman Anthony to provide design services for their facilities' needs. We're ready to apply our award-winning expertise and technology to the success of your next design project.
